**ECONOMIC SECURITY: MODERN MANAGEMENT MODELS**

The article is devoted to the conceptualization process of management model to ensure economic security. It is proposed to use the decomposition method, which enables the management structure in accordance with the selected morphological tricks. The idea of structuring the management of economic security based on the decomposition method was based on the developed conceptual model of process management to ensure the economic security of the enterprise.

The problem of providing economic security is a major in management. Developing strategies enterprises should be provided with objective information about the state of economic security, external and internal threats and to rely on an effective mechanism for management of economic security company. All of the above suggests the need to study the components of the conceptual model of the process control of economic security (ESE).

Despite the urgency of the issues of economic security, the form and content of its controls are in an inconsistent state. It is worth noting that the current and projected substantial characteristics of Economic Security should have the proper form, must be arranged in a certain way. Only under the unity of form and content can be achieved harmonization in the management of economic security. Using the decomposition method in the management of economic security allows you to structure the process control according to the selected morphological focus of ESE.

By morphological focus ESE understand the process of reviewing internal initial shape, which is designed to help learning and systematization of signs, their category, develop strong practical links. Morphological tricks ESE may be: tricks coordination of interests, resource support, opposition and threats of economic viability.

Decomposition should be inherent properties such as adaptability (natural or acquired property to adapt to changes in the conditions of management of economic security, in particular those that are due to the variability of external and internal environment, life cycle phase, etc.) and recomposition (the ability to restructure, upgrade).

It should be noted that the study of the theoretical foundations of economic security management, first, should be based on morphological analysis of the control system of economic security. Because of this system is based on the selection of possible solutions for individual parts of the problem (the so-called morphological features that characterize the device) and then systematize their combination (combination).

Thus, in order to achieve harmonization in the management of economic security it is proposed to use the decomposition method, which enables the management structure in accordance with the selected morphological tricks ESE. The idea of structuring the management of economic security based on the decomposition method was based on the developed conceptual model of process management to ensure the economic security of the enterprise.
